Questions & options

1. Intent (Intent Translation & Fulfillment)

How does the System translate and process intents & ensure intent fulfilment ?

Note:

1) Intent could be fault management requirements such as MTTR (mean time to repair), troubleshooting priority, etc.

2) Fault management target include alarm severity, alarm threshold, etc.

A (4): The system supports the input of fault management intent by simplified human-system interaction.

B (3): The System processes Intent through the execution of predefined Rules and Policies.

C (2): Fault management task targets and policies are manually defined based on expertise.

Guideline: some guidance text.
